

I have a dream that global warming will stop. Global warming melts the ice in Antarctica which causes sea levels to rise and flood places.

To stop global warming we must stop polluting. Also we must stop using a lot of electricity. These are the things that cause global warming.

We must do things to stop global warming. We should walk to where we want to go because if we drive the car will pollute the air, and not only will it cause pollution, it will also use gas. Also instead of using electricity energy, we should use wind, water and solar energy. We must build dams to collect water energy, wind mills to collect wind energy, and solar panels to collect solar energy.

So in the winter the temperature can rise as high as 60 degrees Fahrenheit because of global warming, and the sun is out. You some times might hear or read in a magazine or newspaper about how global warming cracks the ice in Antarctica and melts them. We must stop global warming or else it will flood places. Global warming is going to flood Manhattan first and it can cause a lot of damage. Global warming can also cause hurricanes. The effects of global warming can be very destructive and do damage to many places.

Global warming is a problem that many people in the U.S. face. Global warming is actually a very serious problem. Now many people should try to stop global warming.
