

I have a dream that the earth will be free of global warming. Global warming is when the atmosphere traps all the heat in and all the heat melts the ice into water. We polluted the air so now global warming is affecting us in many different ways.

Global warming is melting all the ice in Antarctica and pretty soon, there will be a huge flood because the sea-level is rising. This is because when the earth becomes too hot, there will be an excess of water that will flood the whole earth. Human beings will drown.

Global warming also affects animals. The ice is getting thinner and thinner and animals who live on ice are falling into the freezing water. For example, polar bears are going to be extinct because they can't swim for the rest of their lives. Animals are really important to the world, so we should try to save them.

Global warming is a huge problem. If we don't do anything about it, we will all drown. To stop global warming, we can save energy. We can do that by turning off objects that use electricity when we are not using them. We can also buy hybrid cars and carpool so we won't use as much gas and pollute the air. Another way to stop global warming is by not littering. We can recycle and pick up garbage from the ground.

If we can stop global warming, we can save many living things, including ourselves. If we can stop global warming, the earth would be a better place. Stop global warming and save the earth!
